

New Iso-Whey: upgrade your strengt!

27/12/2024

Ready to discover the new version of our Iso-Whey?

Your favourite protein powder is back with an improved formula for an even more beneficial and enjoyable experience!

SuppleFit Iso-Whey is a must-have for athletes and anyone looking to boost their protein intake. Thanks to their high protein content and quality in terms of amino acid composition, they immediately provide the body with everything it needs to build and strengthen muscle tissue.

What's new?

The new Iso-Whey is now even easier to prepare and more delightful to enjoy. Their new formula reduces foam during preparation, resulting in a smoother and tastier shake. Choose between Coconut (code SU0118) or Hazelnut (code SU0119) flavours and mix with water, milk, vegetable drinks or yogurt for a unique and delicious blend of wellness.

But that's not all!

We've enhanced the Iso-Whey formula with Magnesium and Prebiotics to make it even more beneficial for your body. Magnesium helps reduce fatigue, supports normal energy metabolism and contributes to normal protein synthesis. Prebiotics, on the other hand, promote a balanced intestinal flora.

Ready to build the body you've always dreamed of?
